The Superspin is an advanced perfusion technology which permits to obtain very high viable cell densities in animal cell culture. The concept is based on a rotating filter with a mesh size slightly larger than the cell diameter. By varying the filter surface speed it is possible to control the cell retention rate inside the reactor. A cell retention of 80 90% is considered to be optimal for

The cell is the basic unit of life. All organisms are made up of cells (or in some cases, a single cell). Most cells are very small; most are invisible without using a microscope. Cells are covered by a cell membrane and come in many different shapes. The contents of a cell are called the protoplasm
