## Differential Equations - Boundary Value Problems

In this section we'll define boundary conditions (as opposed to initial conditions which we should already be familiar with at this point) and the boundary value problem. We will also work a few examples illustrating some of the interesting differences in using boundary values instead of initial conditions in solving differential equations.

### Chapter 5 Boundary Value Problems - IIT Bombay

Chapter 5 Boundary Value Problems A boundary value problem for a given differential equation consists of finding a solution of the given differential equation subject to a given set of boundary conditions. A boundary condition is a prescription some combinations of values of the unknown solution and its derivatives at more than one point. Let  $I = (a, b) \subset \mathbb{R}$  be an interval. Let  $p, q, r: (a, b) \rightarrow \mathbb{R}$  be continuous functions.
