Brauer Groups Hopf Algebras and Galois Theory Stefaan

The Brauer-Long group of a Hopf algebra over a commutative ring is discussed in Part III. This provides a link between the first two parts of the volume and is the first time this topic has been discussed in a monograph.

Brauer Groups Hopf Algebras and Galois Theory Stefaan

Part II presents a systematic development of the Galois theory of Hopf algebras with special emphasis on the group of Galois objects of a cocommutative Hopf algebra. The development of the theory is carried out in such a way that the connection to the theory of the Brauer group in Part I is made clear. Recent developments are considered and examples are included.

Hopf algebras are generalizations of groups and their concepts are acquiring importance in the treatment of conformal field theories, noncommutative spacetimes, topological quantum computation and other important domains of investigation. But there is a scarcity of treatments of Hopf algebras at a level and in a manner that physicists are comfortable with. This book addresses this need

Computing the brauer long group of a hopf algebra I The

Abstract. Let H be a commutative, cocommutative and faithfully projective Hopf algebra over a commutative ring R . Using cohomological methods, we obtain a description of a subgroup of Long's Brauer group of H -bimodule algebras: where the map is induced by the smash product, and where $BD_s(R, H)$ is the subgroup of the Brauer-Long group

A bialgebra that admits a Hopf Galois extension is a Hopf

The authors prove that if A is Galois over its coinvariants $B = LH \text{ Ker}$ and B is a sub-Hopf algebra of A , then A is itself a Hopf algebra. This generalizes a result of Cegarra [3] on group
