US6746180B2 Remediation of contaminates including low

The attractiveness of bioremediation arises at least in part from the fact that the process takes advantage of intrinsic biodegradative processes of microorganisms and because the compounds that are the target of remediation are degraded to innocuous end products. In this respect, bioremediation-

based remediation approaches using either in situ or off site designs have been successfully

A comparative study to evaluate natural attenuation

Biodegradation through the functional adaptation of indigenous microorganisms seems to be the main pathway for pollutant removal, as previously suggested by Declercq et al. (2012). However, in this study, the removal of 5 6 rings under NA conditions was relatively low, compared with 2 3, 4 ring compounds (Table 1 , S2).
